Project Description

Leon County, in coordination with the Florida Department of Environmental Protection (FDEP) and Florida Fish and Wildlife Conservation Commission (FWC), will be conducting a drawdown on Lake Munson beginning early November.

Proposed Improvements

The drawdown will help address the algal, nutrient, and aquatic vegetation challenges in the lake. The drawdown will kill off the hydrilla and algae and will form a "cap" on the sediment to reduce the nutrients leaving the sediment. In addition to the immediate benefit, drawdowns provide long-term benefits to the nutrient-rich sediment.
