Project Description

This project provides rehabilitative repair to Springhill Road Bridge over Munson Slough to ensure the long-term safety of this facility. This project will provide temporary pile support until the structure is replaced by FDOT (under design). Springhill Road Bridge was built in 1949 using timber piles, concrete bents, steel and a concrete superstructure. The bridge spans Munson Slough at the outfall into Lake Henrietta. Currently, the bridge's timber piles are showing some deterioration. Additionally, Munson Slough experiences extreme fluctuation of stream elevation.

Proposed Improvements

- Additional permanent pile installation
