Project Description

The Project is located on Springhill Road south of Orange Avenue, in the Anita L. Davis Preserve at Lake Henrietta Park. The stormwater facility was originally completed in 2001 to reduce adjacent flooding and protect Munson Slough and Lake Munson from pollutants such as sediments and nutrients.

Proposed Improvements

Phase 1: Property acquisition of dewatering site for sediment removal

Phase 2: Design and permitting of spoil handling site

Phase 3: Hydraulic dredging of the stormwater facility sump area

Phase 4: Design and installation of an enhanced trash capture mechanism at the inflow points to the facility
